NCERT 9.7.1.7

This question is from class 9 ncert chapter 7.triangles

1. **AB** is a line segment and **P** is its mid-point. **D** and **E** are points on the same side of **AB** such that $\angle BAD = \angle ABE$ and $\angle EPA = \angle DPB$. Show that

- (a) $\triangle DAP \cong \triangle EBP$
- (b) $AD = BE$

Figure 1: $\triangle DAP$ and $\triangle EBP$

Construction steps:

(i) Let assume, the input parameters are,

Parameter	Value	Description
θ_1	30°	$\angle BAD = \angle ABE$
θ_2	60°	$\angle EPA = \angle DPB$
A	$\begin{pmatrix} 0 \\ 0 \end{pmatrix}$	Reference point at origin
B	$\begin{pmatrix} 5 \\ 0 \end{pmatrix}$	point B on the same axis of A

Table 1: Input Parameters

\therefore the output can be calculated as,

Parameter	Value	Description
r	$\ A - B\ $	Length of AB
P	$\frac{\mathbf{A} + \mathbf{B}}{2}$	Mid-point of AB
D	$\mathbf{A} + \begin{pmatrix} r \cos \theta_1 \\ r \sin \theta_1 \end{pmatrix}$	From point A makes an angle θ_1 in anticlock-wise with line (AB , AD)
E	$\mathbf{B} + \begin{pmatrix} -r \cos \theta_1 \\ r \sin \theta_1 \end{pmatrix}$	From point B makes an angle θ_1 in clock-wise with line (AB , BE)
D	$\mathbf{P} + \begin{pmatrix} r \cos \theta_2 \\ r \sin \theta_2 \end{pmatrix}$	From point P makes an angle θ_2 in anticlock-wise with line (BP , DP)
E	$\mathbf{P} + \begin{pmatrix} -r \cos \theta_2 \\ r \sin \theta_2 \end{pmatrix}$	From point P makes an angle θ_2 in anticlock-wise with line (AP , EP)

Table 2: Output Parameters

\therefore By, joining these points forms the required figure
